

T Level Technical Qualification in Digital Software Development (Level 3)

Specimen Assessment Material

Time 2 hours 30 minutes

**Paper
reference**

XXXXXX/XX

Core: Employer Set Project

TASK 3: Designing a solution

Task Booklet

You must have:

Task3_RBSX_data.csv

Information

- The total mark for this set task is 18.
- This booklet is specific to each series and this material must only be issued to students who have been entered to undertake the task in the relevant series.
- This booklet must be kept securely until the start of the timetabled assessment.

Continue ►

Instructions to Students

You must complete ALL parts of the activity within the assessment.

Read the assessment information carefully.

You must plan your time and submit all required evidence at the end of the supervised period.

The task must be undertaken at the time and on the date specified by Pearson.

You have **2.5 hours** in total to complete this task.

Your provider will advise you of when any supervised breaks have been scheduled.

The task must be completed under supervised conditions.

During this task you are **not** permitted:

- to have access to the internet
- to use AI or any other tool designed to automate producing a solution.

Files provided for use during this activity:

- *Task3_RBSX_data.csv*

Your work and any material provided must be kept securely at all times.

Set Task Brief

The Data Analytics module will include a tool that will allow users to explore how the value of different currencies varies over time.

To implement this the system needs a data service that will turn raw data into meaningful information.

Your manager has decided to open the problem up to all developers to see if they can design a suitable solution.

Your manager has provided you with some sample data and a set of requirements that have been agreed with the client.

The sample data is provided for you in the file *Task3_RBSX_data.csv*.

Quality of Communication

When producing evidence in this activity, you should use high quality communication that:

- uses appropriate technical vocabulary
- is suitable for the target audience
- ensures the different elements of your design are clear, allowing a third party to easily interpret them.

(3)

Activity

Produce algorithm designs to show how you would implement the system and user requirements provided in the Set Task Information.

The algorithm designs should be of sufficient detail to:

- effectively communicate the intended solution
- allow the client to make informed decisions
- allow a third party to use the design documents to create the proposed solution.

You should use either pseudocode or flow charts to communicate your algorithms.

Use the Set Task Information and sample data file provided when completing this activity.

(18)

(Total for Task 3 = 21 marks)
(this includes 18 task marks and 3 marks for quality of communication)

Outcomes for Submission

Save your completed design documents as PDF files.

All files should be saved in your folder for submission.

Use this naming convention:

- *Task3_DSD_[document name]_[Registration number]_[surname]_[first letter of first name]*

Set Task Information

Requirements agreed with the client:

- the solution must allow users to input an amount in one currency and convert this to another currency (based on most up-to-date figures)
- the solution must also:
 - be easy to use
 - display information in a meaningful way
 - make use of appropriate textual, numerical and graphical output in a way that would be relevant to the end user.

Note – the data shows the daily conversion rate between currencies for a 12-week period.
